Correct
You need a backend for VMSS2, a listener for the site adatum.com and a rule to redirect the request from the listener to backend VMSS2

Selected Answer: **ADE**

A. Add a backend pool. | D. Add a listener. | E. Add a rule.
VMSS2 is newly created and would need a backend pool. AGW needs to listen to HTTP traffic and forward the HTTP requests based on the rules for VMSS1 Pool1 or VMSS2 Pool2 as per the question.
